

Fall 2024 BHI-CAHBIR Pilot Research Pilot Grant Program for RU-New Brunswick Faculty

The Rutgers Brain Health Institute (BHI) and the Center for Advanced Human Brain Imaging Research (CAHBIR) are pleased to announce the availability of \$60,000 Pilot Research grants to fund RU-New Brunswick faculty in initiating neuroimaging research at CAHBIR.

Objective: There are often barriers to initiating neuroimaging research, including the expense of collecting pilot data, and the need for methodological skills in designing experiments and analyzing data. The **Pilot Research Grants** are aimed at aiding RU-New Brunswick faculty in developing research projects that make use of CAHBIR facilities, and to assist in the development of the skills necessary to successfully execute the MRI research. Please note that RBHS/RWJMS faculty are not eligible for these funds as a sole PI but may serve as a co-PI with a member of the RU-NB faculty. Such collaborations are encouraged. Alternatively, RBHS/RWJMS faculty may apply for a research mini-voucher designed for RBHS faculty (See RFP at <https://sites.rutgers.edu/cahbir/pilots/>).

These grants serve the dual purpose of providing funds for pilot neuroimaging studies, while simultaneously providing training that will allow a lab to work more independently on future projects. A core piece of this training is a 10-hr workshop aimed at familiarizing researchers with MRI scanning, image processing and analyses. PIs can include several members of their lab as part of the workshop, although priority should be given to individuals who are likely to be present in the lab for several years. Additional support is provided through one-on-one sessions with CAHBIR staff aimed at implementing the funded research project and providing assistance with study design and data analysis. Researchers already possessing sufficient neuroimaging expertise are not required to attend the workshop and can allocate those funds toward data collection and other CAHBIR technical services.

RU-NB faculty may alternatively apply for a \$40,000 mini-pilot award, which only require a 3-page research proposal.

Human Brain Imaging Core facility capabilities: A state-of-the-art research-dedicated 3T Siemens Prisma scanner with 64 and 20 channel head/neck coils, MRI-compatible visual/auditory stimulation and behavior/physiological response equipment including eye tracking, mock scanner and a contrast agent injector. The core facility also provides expert technical support to users with all levels of experience. More information about CAHBIR is available at <https://sites.rutgers.edu/cahbir/>. CAHBIR also provides the ability to collect **EEG** data and perform **rTMS** within CAHBIR lab space in the RWJMS Staged Research Building, and investigators may include use of these systems as part of their research proposals.

Eligibility: The contact PI for the application must be a full-time tenure track or tenured faculty in RU-NB. Funding is provided by the RU-NB chancellor's office. Individuals outside of RU-NB may serve as a co-PI or co-I, and indeed, such collaborative proposals are encouraged. Individuals who have previously received funding for CAHBIR pilot awards may apply for additional funding but must provide a sufficient explanation for why a second pilot award is needed, and a description of progress from their original application. While RBHS/RWJMS faculty may not serve as sole PI on these pilot grants, they can apply for a research mini-voucher designed for RBHS faculty (See RFP at <https://sites.rutgers.edu/cahbir/pilots/>).

Number of grants available: Up to 2 awards are available.

Application format and budget preparation: Applicants should provide an R21-style description of the proposed research (including specific aims, and up to 6 pages Research Strategy). Within the research description, please describe explicitly how the pilot funding will promote future research and grant proposals. In addition to the research description, applications should include Literature Cited, Budget, and NIH Biosketches for key personnel. The application should be single-spaced, and use font/size Arial 11 with 0.5 inch page margins. All applications **must include** the Cover page and submission checklist linked here ([BHI-CAHBIR-Application-Cover-Page-2024f.docx](#)).

Budgets: Of \$60,000 awards, at least \$45,000 must be spent on CAHBIR services, which may include scanner reservations run by our MRI technologist at a rate of \$745/hr, technical support (protocol design and set up or Luci/Zald consultation at \$200/hr, programming and analyses or specific training in using equipment at \$140/hr). A data archiving fee of \$20 per subject should be included for every scan. Additionally, because of the computational demands (on google cloud services and Amarel), a one-time fee of \$250 should be budgeted if CAHBIR is assisting with analyses. Studies should budget for neuroradiological reads of incidental findings (\$60) based on expected rates of such findings in the population being studied (recommended budgeting of 5% of young healthy subject samples, and a minimum of 20% of older samples). A mock scanner is available for acclimating participants to the scanner environment (\$40 per hour) and is recommended for studies with children or highly anxious individuals and saves money from subjects who withdraw from MRI studies due to claustrophobia. \$500 per attendee should be budgeted for the MRI workshop provided annually by CAHBIR faculty). The remaining \$15,000 can be used for participant recruitment costs and support of research personnel (post-doc, graduate students, research coordinator) involved in the grant project. No overhead costs, faculty salaries or equipment purchases are allowed on the grant award.

Mock Budget- one year	Number	Cost
Workshop (\$500 per attendee)	2 attendees	\$1,000
CAHBIR Technical Support: Protocol design/Setup/Consultation (\$200 hr)	10 hours	\$2000
CAHBIR Technical Support: Programming/analysis/training (\$140 hr)	30 hours	\$4,200
Scanner Reservation (\$745 hr), includes MRI technologist	50 hours	\$37,250
Mock Scanner (\$40 per hour)	-	-
Data Archiving (\$20 per subject)	50	\$1000
Computing Fees	1 time fee	\$250
Neuroradiologist read of incidental findings (\$60 per read)	4	\$240
Within scanner eye tracking or psychophysiology (\$20 per hour)	50	\$1000
Phlebotomy (\$180 per hour not including supplies)	-	-
EEG (\$50 per hour)	-	-
rTMS (\$145 per hour)	-	-
Participant Fees (\$20 per hour)	50 subjects (2 hrs)	\$2000
Research Assistant Effort		\$10,800
Lab supplies		\$250

Total pilot grant award	\$59,990
--------------------------------	-----------------

RAPSS submission and IRB approvals are not required at the time of initial mini-grant application submission.

The principal investigators of meritorious applications, selected from the scientific review, will be asked to obtain IRB approval for the proposed pilot project **within four months** of being informed of the scientific review results. If a pilot grant is funded, the first \$5,000 can be released to pay for MRI workshop attendance and other CAHBIR services prior to receiving IRB approval. Funds cannot be used for any other purposes prior to obtaining IRB approval. The remaining \$55,000 will be released following approval of the IRB protocol.

CAHBIR staff can provide assistance in developing documents for the IRB, especially as it relates to MRI procedures, risks, incidental findings, and analyses. The process of IRB approval once a protocol is submitted can take 8 weeks or longer. Regardless of the speed of the IRB, it will be the responsibility of the applicant to obtain the IRB approval within four months of award notice; therefore, it will be critical to begin the IRB application and submission process as soon as your project is selected and respond in a timely manner to address issues raised by the IRB. Because the funding for these mini-grant awards is not open ended, studies that do not obtain IRB approval within 4 months may not be able to receive further funding and will be asked to forfeit previously unspent funds.

Review process: All pilot grants will undergo a review process organized by BHI/CAHBIR. They will have an initial review to judge scientific quality and be assigned a priority score by reviewers. Reviewers may be internal or external to Rutgers but will not be from the same primary department as the applicant. They then will be reviewed by an internal BHI/CAHBIR committee to allocate funds consistent with the long-term strategies for developing human brain imaging research at Rutgers. A main factor in determining funding will be perceived likelihood that the pilot data generated will lead to external funding. Applicants will receive brief written reviewer critiques. If a pilot proposal is viewed as having significant potential, but has flaws, a revision may be requested. In such cases applicants will be requested to return a revised version within a month of notification.

Post-award reporting: The pilot awardees will be asked to provide a progress report within a year of the award notice. With sufficient progress, investigators may request a no-cost extension at that time. All pilot awardees will be required to submit a final progress report within 6 months of the end of the award. This report must include the status of manuscripts arising from the pilot award and grant applications submitted, as well as results obtained and significance of those results. The pilot awardees will also be asked to provide evidence of related extramural grant applications within a year of completion of the award, and outcomes within a two-years of the award to gage the success of the program. Awardees must acknowledge the BHI-CAHBIR pilot grant program in publications or presentations that result from the pilot grant project. Awardees must also report any extramural awards received as a result of the pilot grant project.

Submission deadline: Oct 15th, 2024. Awards will be announced by Dec. 1, 2024. Submissions received after Oct. 15th will only be evaluated if funds remain after evaluation of on-time applications.

Questions: Questions about the proposals should be directed to david.zald@rutgers.edu
